DETAILED ACTION

This application filed May 4, 2001 is a 371 National stage filing of PCT/US99/15625, filed July 8, 1999, which claims benefit to US Application 09/113,774, filed July 10, 1998, now US Patent 6,129,911.

Claims 1-48 are pending and currently under examination.

Election/Restriction

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 1-15, 18-22 and 42, drawn to an isolated liver cell cluster comprising a liver stem cell.
- II. Claims 16, 17, 33 and 34, drawn to an isolated liver cell cluster comprising a liver stem cell which further comprises a heterologous polynucleotide encoding a therapeutic protein.
- III. Claims 35-41, drawn to method for obtaining a sample of isolated liver cells.
- IV. Claims 43 and 44, drawn to an extracorporeal liver assist device comprising a liver cell cluster.

Art Unit: 1632

- V. Claims 45 and 46, drawn to a method of hepatic transplant comprising transplanting an isolated liver cell cluster comprising a liver stem cell.
- VI. Claims 47 and 48, drawn to a method of treating a disease comprising transplanting an isolated liver cell cluster comprising a liver stem cell.

The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

A) The inventions of group I, II, III, V and VI have been found by the Examiner to have no special technical feature that defined the contribution over the prior art. In the instant case, liver stem cells have previously been described in the art. Further, the general methodology encompassed by claim 35, group III, of isolating cells from a tissue has been previously described. Finally, Groups V and VI as broadly claimed encompass a liver transplant.

B) Unity of invention between different categories of inventions will only be found to exist if specific combinations of inventions are present. Those combinations include:

- A) A product and a special process of manufacture of said product.
- B) A product and a process of use of said product.
- C) A product, a special process of manufacture of said product, and a process of use of said product.

Art Unit: 1632

D) A process and an apparatus specially designed to carry out said process.

E) A product, a special process of manufacture of said product, and an apparatus specially designed to carry out said process.

The allowed combinations do not include multiple products, multiple methods of using said products, and methods of making multiple products as claimed in the instant application, see MPEP § 1850.

Since Applicant's inventions as claimed do not contribute a special technical feature when viewed over the prior art they do not have single general inventive concept and lack unity of invention.

Because these inventions are distinct for the reasons given above have acquired a separate status in the art as shown by their divergent subject matter restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any

Art Unit: 1632

amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
